

Module	Purpose
ESP32-WROOM-32 Module	Main microcontroller that processes data and provides Wi-Fi/Bluetooth connectivity
DHT22 Sensor	Measures temperature and humidity
USB Port	Supplies power and allows program uploading
Voltage Regulator	Converts input voltage to stable 3.3V for the ESP32
GPIO Pins	Connect the ESP32 to external components like the DHT22
Power Pins (3V3 and GND)	Provide power connections to the sensor and circuit
Pull-up Resistor (10kΩ)	Stabilizes the DHT22 data signal for proper communication
